

WHICH WEIGHT?

Meadow Quality's Hellenic System gives a detailed carcase analysis which provides the producer with as much carcase information as possible. All our finished pig payments are fully computerised.

The analysis shows how pigs have performed in terms weight, back fat and grade. Monthly grading analysis reports are automatically generated and sent out to all producers, allowing comparisons of performance. The provision of comprehensive and timely information enables early identification of problems, the seizing of new opportunities and a full grasp of enterprise performance.

Often, producers ask for data across different timescales and factories for management purposes and this information can be emailed, following discussions. Load statistics are also auto-generated to your smart phone or tablet computer - as per the example below.
